Customer Reviews

if you have an energetic child like my 5 year old who is always asking why - this is a great book. I got this book around summer solstice when my son did not understand why he is going to bed when it is so bright outside. By doing the "experiment" with an orange and a flashlight, I think he understands why we have seasons.

We used this book to discuss the science behind season changes and Winter Solstice with our five year old and his homeschool coop group. The book does a fabulous job of putting concepts into language that kids understand without watering down the information too much. The pictures and

diagrams are great for visual learners as well!

I'm a student studying to become a teacher and I used this book to build a lesson plan. I think the concept of how seasons changes is presented in a manner for 2nd or 3rd grader to easily understand. The hands-on demonstration included in the book was also helpful in enforcing the concept of why there are 4 seasons. The additional resource information provided at the back of the book is also a helpful tool for use with modifying your lesson plan to meet various student learning levels. I will keep this book in my library for use when I do become a teacher.

I really like the "Let's Read and Find out Science 2" series. These are great science books for elementary school and they are perfect for my first grader. They use familiar examples to introduce basic scientific concepts in a simple but fun way. They are interesting for both kids and adults. I have found them to be a valuable tool to teach these concepts to my kids. This book about the sun and its impact on the seasons is really fun. The diagrams are very well done.

All of the "Let's Read and Find Out" science books are a big hit in our house. This one is no different, and a welcome addition to our home school library.

Our three-year-old granddaughter loved this book. She's really interested in science, and I've bought her a number of books from this series. All are excellent.

This book explained the sun's energy is responsible for the change in seasons in a developmentally appropriate way to my second grade class.

You won't be disappointed with any of the Let's-Read-and-Find-Out Science books. As a primary grade teacher, I am extremely satisfied with this product. The text is easy to read, illustrations are always colorful and relate to the text, and diagrams provide additional information and explanation when needed. I constantly use these books to teach science concepts to my little ones.
