Age Range: 4 - 8 years

Grade Level: Kindergarten - 4

Customer Reviews

An introduction into how the heart works along with feeling your pulse and listening to a heart's beat with amusing illustrations reader can imitate and view diagrams of the heart. My son frequently will tell me he can hear his heart once he rests after playing around. I figured he would enjoy exploring the activities among the last two pages in Hear Your Heart like How to Measure Your Heart Rate and How to Make a Stethoscope. There are several kids, adults and babies illustrated among the thirty-three pages of Hear Your Heart in various settings as well as illustrations of the heart in pink, red and black colors. The areas are identified to which is a vein and artery with other illustrations showing arrows in how the heart actually beats. Hear Your Heart begins with a girl at the Doctor's office showing a real stethoscope that is cold and making the girl shiver. She much prefers her homemade stethoscope made out of a cardboard tube. There are a few pages showing the girl and her sister listening to each other's heart and then other kids doing the same thing. Hear Your Heart

is easy to follow written in a way that kids can understand and comprehend based on the detailed illustrations. The style Hear Your Heart is written in offers all the answers that my child has along the way. This encourages my son to watch the second hand while he counts how many times his heart beats in one minute. There are times we learn like when exercising that the pace will be faster. Also noted is the ninety times a minute for an eight-year old. This is now a figure my son is striving to reach. A man's will be in the area of seventy-two while an infant is around one hundred twenty times a minute.
